

VAGGA JAYALAKSHMI

Data Analyst — PG Diploma in Data Science & AI — IIIT Bangalore

vaggajayalakshmi@gmail.com — +91-7013666368 — Bengaluru, India — GitHub — LinkedIn — Portfolio

Summary

Data Analyst with 3+ years of experience in **SQL**, **Power BI**, and **Advanced Excel** — analysing operational datasets, building **KPI dashboards**, and delivering **actionable insights** that support business decisions across cross-functional teams. Experienced in **data cleaning**, **ETL workflows**, **data modeling**, and **stakeholder reporting** with strong ability to identify trends, patterns, and business opportunities from complex multi-source data. Holds PG Diploma in Data Science & AI from IIIT Bangalore with strong exposure to **Python**, **machine learning**, and **statistical analysis**.

Skills

SQL: CTEs, Joins, Window Functions, Query Optimisation, Data Extraction, MySQL

Power BI: DAX, Power Query, KPI Dashboards, Relational Models, Operational Reporting

Advanced Excel: Pivot Tables, VLOOKUP, SUMIFS, COUNTIFS, Power Query, Macros, Data Validation

Python: Pandas, NumPy, Data Cleaning, Statistical Analysis, EDA

Data Modeling: Star Schema, Snowflake Schema, Fact & Dimension Tables, Relational Design

Data Cleaning & Validation: Data Quality Checks, Inconsistency Resolution, QA Checklists, Accuracy Verification **ETL & Data**

Pipelines: Multi-source Data Integration, Transformation Workflows, Pipeline Development

Data Governance: Data Dictionary Maintenance, Documentation, Process Standards

Communication: Stakeholder Reporting, Executive Presentations, Cross-functional Collaboration

Education

PG Diploma in Data Science & AI

Jan 2026 – July 2026

IIIT Bangalore — SQL, Python, Machine Learning, Statistical Analysis, Power BI, Data Visualization, ETL Pipelines, Coloud computing

B.Sc. Agricultural Sciences

2018 – 2022

Bharatiya Engineering Science and Technology Innovation University

Experience

Arjate Farm Pvt Ltd

Jun 2022 – Dec 2025

Data and Operations Analyst

- Analysed operational datasets from multiple sources using **SQL** (CTEs, joins, window functions) on **MySQL** — identified **trends, patterns, and business opportunities** including **30% demand concentration** in key regions, supporting strategic resource allocation decisions.
- Designed **data models** incorporating **fact and dimension tables** and **star schema** principles — enabled efficient querying, reduced data redundancy, and improved reporting performance across business teams.
- Built and maintained **Power BI dashboards** with **DAX** measures and **Power Query** transformations tracking operational **KPIs** — replaced **manual reports** and reduced weekly reporting effort by **40%**.
- Cleaned and validated multi-source datasets resolving **20–30% data inconsistencies** — maintained **data quality checks**, QA documentation, and data dictionaries ensuring accuracy and consistency across all analytical outputs.
- Identified **seasonal demand patterns** and regional performance trends across **3 states** — uncovered **22% revenue concentration** in Q2, delivering structured insights that supported inventory planning and business strategy decisions.
- Automated **Excel reporting workflows** using **Power Query**, Macros, Pivot Tables, VLOOKUP, and SUMIFS — reduced manual reporting effort by **20%** and ensured consistent, accurate outputs for stakeholders.

Namdhari Seeds Pvt Ltd

Oct 2021

Data Analyst Intern

- Cleaned, validated, and analysed data across **8+ crop variants** and **50+ field plots** using **Excel** and **SQL** — identified performance patterns and delivered data-backed recommendations improving yield efficiency by **15–20%**.

Projects

NYC Taxi Demand Forecasting [Project Link]

(Python, Pandas, EDA)

- Analysed **300K+** taxi trip records using **Python** and **35+ visualisations** to uncover demand, revenue, and geographic patterns.
- Identified **3 PM peak demand patterns**, **17% night revenue contribution**, and **0.87 correlation** insights enabling fleet and pricing optimization.

Traffic Collision Analysis [project Link]

(PySpark, SQL)

- Built **PySpark + SQL pipelines** to process **100K+** collision records.
- Discovered poor-light conditions caused **2×** higher accident severity and **35%+** nighttime severe incidents.

Policy Analytics on Farmer Insurance Scheme (PMFBY) [Project Link]

(MySQL, Advanced SQL)

- Wrote **business-driven SQL queries** (joins, subqueries, aggregations, KPI calculations) on **1,800+ district-year records** — developed metrics including coverage rate and premium per farmer, identifying districts with **<1% insurance penetration** for policy and financial decision-making.

Supply Chain Optimization [Project Link]

(SQL)

- Analyzed **15K+** supply chain transactions using **SQL**.
- Delivered optimization insights identifying **\$58K** savings and improving fulfillment efficiency by **18%**.

Sales Analytics Dashboard [Project Link]

(Power BI, DAX)

- Built a **Power BI dashboard** using **DAX** measures analysing **6,113 shipments** across **6 countries** and **22 products**
- Identified **\$20.5M profit (60.3% margin)** and uncovered **10.2%** low-box shipments, enabling supply chain and profitability optimization.
